

7 Good Habits to #DefendYourDevice

From Malware

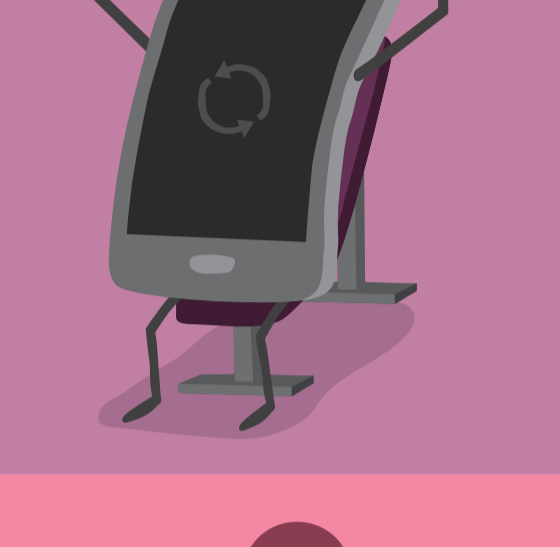

Your mobile device can fall victim to cyber criminals who use malicious software (malware) to access your information, your money — even your identity.

Here's how to stop them:

1

Keep your operating system and apps **UPDATED**

2

Use **SECURE** Wi-Fi, and avoid unknown networks

3

Install/download from **TRUSTED** sources

4

Don't click links or attachments in **SUSPICIOUS** email or texts

5

Turn **OFF** Wi-Fi, location, and Bluetooth when you can

6

Install **ANTIVIRUS/ANTISPYWARE** protection

7

Don't "**JAILBREAK**" (disable) software that prevents unauthorized downloads
